I just wish it was a bit smaller, so I don't need to scratch up my table. With multiple connectors, you might as well just get a more powerful development platform (esp as it won't need a mouse) like a BeagleBoard. If they could make it a bit bigger, add a SD slot and use a RAM module like on this BeagleBoard: ~~~ jacquesm You would need a fan in there to keep it alive, as it's too small to put a heatsink in there. But this is really quite impressive, if I could get such a small screen into my pocket I'd be very happy. ~~~ boudewijnrempt I presume it needs quite a bit of power, and even more heat. ------ Sapient "We will provide an Ubuntu image of Linux Kernel 3.4 or later, and GNU development tools, and our C++ libraries, including the standard library (glibc 2.11+), GIMP, xine, blender, cairo-dock, diveintopython, wine, docky, libreoffice, and much more." Note that libreoffice is not included in the default Ubuntu 11.04 images. ~~~ RKoutnik Same here. ~~~ brynosaurus (Yes, it is a build problem.) We've seen it before. When economic disruptions hit an economy—whether it's a war, a recession, or a prolonged depression—many countries can't handle it, and this is when civil wars start, and today, we may be at such a time. Reuters reports that a heavily armed gang of militants are fighting in Mali, with a

Rendering, especially in a max-based environment .Q: How can I configure a custom endpoint in AWS SSM? I'm trying to configure an endpoint for a new environment. I have a new environment in AWS called "new-env", and when I run the following command in SSM to retrieve the endpoint I get: aws ssm get-parameter --name new-env --query 'Parameter.Value' Instead of displaying this URL, I'd like for the URL I can display to be How can I configure this via SSM? I tried to search for an answer, but I was not able to find anything related, as many examples only show how to get a default environment endpoint. A: The reason you are seeing the URL is because you are using -R to resolve it. Instead you want to use -q (query) to have it just print out the value. Basically the --query directive is just for providing parameters to the call. You can do something like this aws ssm get-parameter --name new-env --query 'Parameter.Value' But there are many more options too. Utility of left atrial appendage flow velocities as predictors of major bleeding in patients with nonvalvular atrial fibrillation. The clinical benefit of assessing left atrial appendage (LAA) flow velocities in patients with nonvalvular atrial fibrillation (AF) has not been completely established. We aimed to evaluate the utility of LAA flow velocities as predictors of major bleeding events in nonvalvular AF. We measured LAA flow velocities using transt
