In a many companies, the CEO is just a head of a team of executives with different roles. The specialisation of this project is to take the productivity of the participating agencies and test the effect of different policy frameworks on their productivity. The introductory chapter sets the scene on the different dimensions of the issue of macroeconomic performance under different policy frameworks. The main empirical problem is choosing the appropriate policy framework for the specific country with its particular economy. The paper then discusses the main theoretical challenges which all policy framework design decisions face. The first half of the book addresses the use of the DSGE model in the economic analysis of macroeconomic policy - that is, in the analysis of the effects of policies and institutions on macroeconomic outcomes. The second part provides practical policy design choices for macroeconomic policy in Japan, and then introduces a framework of policies for developing countries. These two parts come together at the end where the same tools are used to

assess the merits of the different policy frameworks. The policy choice includes identifying the optimal policy mix for maximizing economic growth and welfare. The book also provides clear guidelines for the reader to assess the merits of various policy options. Figure 2.1 identifies the chapters within the book where the relevant concepts are introduced: The first chapter introduces the basic concepts of the DSGE model, including the assumptions about the economy, preferences of the agents and households, choice of preference specification, and the uncertainty associated with the economy. It also outlines the basic ideas about the role of shocks in the economy. The assumption of a fully overlapping generation of a technical and a stochastic decision process leads to two main results. The model of an individual policy maker is firstly a very simple setup in which the agent has no preferences and is risk-neutral. In the second chapter the game-theoretic aspects of investment and consumption are introduced. The following chapter introduces a heterogenous household that can differ in their preferences and assets. The chapter on the interaction of the two main drivers 1cdb36666d
