new. designing and implementing tools takes a lot of time and a team of great engineers. the engineers toolset allows you to design, implement, and manage your software projects using proven and reusable components. take charge of your software development with a solid, well-designed, and fast-starting project solution. 2.

solarwinds engineer's toolset offers several network tools. the network test report keeps track of packet loss, performance, response times and more. you can use the built in vpnip6 tool or vpn vpn for router testing or simulation. you can also use the built in packet shaper tool for simulating bandwidth usage on an entire network. use the solarwinds built in network simulation app. this lets you test all of the features of your windows and linux tcp/ip stack. you can configure the parameters of the simulation, such as the port and protocol numbers, timeout, delay, and the bandwidth used for each connection.

---

the network simulator app is easy to use and provides you with all of the information about the connections you are making. the app stores a series of tabs with data that lists the items you have installed on your system, the amount of data transferred, and the connections that were initiated. this info can be downloaded into a tab delimited file or tabbed and graphed. 5ec8ef588b
