I think the most useful aspect of Lightroom for me is still its ability to crop, resize, and rotate in a “straightforward” manner. Even after years in the industry, nothing can replace the convenience of such things. Beyond that, its features are exceptional and it is, overall, arguably my favorite piece of computer software on the market. No doubt, Lightroom has its quirks, but the good stuff far outweighs the bad, and Adobe is committed to improving it almost immediately after it launches the new version of Lightroom. The iPad macOS hybrid Photoshop CC 2019 offers the same routine editing features as the desktop app, at the same superb price point. I do miss the niftier post-processing tools, but I am most enthusiastic about the iPad Pro’s ability to import photos from the phone or iPad camera roll and send them to Photoshop. Though the iPad Pro is great for that type of manipulation, Lightroom is still better appointed to the task. Lightroom is constantly improving its powerful editing gestures with native tools and new features, and those of us who use it on the desktop will find it to be a really fantastic feature. I don’t mind the fact that the iPad Pro is not a full-fledged creative workstation since it has some excellent portfolio management and collaboration tools. However, it can be extremely useful for creating such mini-portfolios, and some of the many accessories designed for it are proven favorites like the Digital Linen Cloth from Apple. However, for the most part, I have never found Photoshop CC on iPad to be truly indispensable. For an example, trying to import a JPEG from Camera Roll and then import it to Lightroom would never work in my experience, and when I attempted to do export a file from the iPad’s Camera Roll, Lightroom would not see the file. I tried to send it to Photoshop but it says it can’t find it. I couldn’t export more than 20 RAW photos from the iPad and Lightroom to Photoshop. The iPad’s keyboard input is so poor, that I find it cumbersome to use the buttons to do anything mostly. And as with the desktop version of Photoshop, the main problem in the iPad version is the lack of Touch Bar tools. Like the iPad Pro, the iPad is a wonderful device in some regards, and does have the potential to bring much more to the creative table for many professionals.

The place that a photo will be most useful is when you need to edit it and move it to a different layer. Smart objects templates are created with the basic tools of Photoshop and they make perfect objects for you to edit and manipulate. You can then move and flip these objects and use the ability to scale the objects in the image. When you replace the original photo with the edited version, you are able to see the image is still sharp and clear to your eyes in the background. Frames are a great way to display all of your photos and other images and they are among some of the most common effects used in photo editing. Photoshop comes in handy when you want to line up two layers, and frame them with more balance and stability. Use this technique to create frames or overlays that will fit the proportions of your artwork. Creating a frame in an image is easy, but aligning two images might be a little trickier. In Elements and the Elements Laser printers, you won't find any of the graphical optimization tools that can be found in the full-fledged version of Photoshop. On the Mac, Elements doesn't include color-correction tools similar to the RGB and Curves options in Photoshop, either. The Elements software lacks graphics-editing features that cost money. In Elements, there's no way to combine a photo with a type object, which was once a popular feature of Photoshop Elements. There are no complex effects, filters, or the like, which is strange for a product that costs \$79. "Would you like to make your documents easier to understand"? If you're using a Windows PC, don't expect to be able to move images from one Mac to another. There are no networked operations when it comes to editing artwork, and it's not a replacement for a camera that takes images.
