Cracking Adobe Photoshop is not as straightforward as installing it. It requires a few steps to bypass the security measures that are in place. First, you must obtain a cracked version of the software from a trusted source. Once you have downloaded the cracked version, you must disable all security measures, such as antivirus and firewall protection. After this, you must open the crack file and follow the instructions on how to patch the software. Once the patching process is complete, the software is cracked and ready to use.

The really interesting user-interface improvements could well be found in the Color panel. Here, you can now select an adjustment you have just made (using the Previous or Next buttons) to receive a brief description of how the adjustment is working. You can even adjust an already set curve from the interface itself (the dialogs are in two windows), and you can drag with the arrow keys or use the Titan button to slide in the separate windows. If you hold down the Shift key you can change how the point moves. For example, you could choose to move the point up or down, or to the left or right, or even to the left or right but weighted towards the bottom of the page—so you can craft a curve that works best for your image. Once you are done editing, the new version lets you expand or collapse the panel using the handy collapsible bar at the top. You can keep the panel expanded or collapsed, and toggle it back and forward with the left and right arrows. The panel is now linked to the Preference panel in Preferences. You can also open a panel using the new “Open With...” feature (via the menu bar when you are selecting an image) and it will open the panel for you. (The new panels may be confusing to people used to the old interface since they are linked to the panel. You don't have to worry about that on the desktop though. You can click the menu, such as on the desktop, and select a panel from inside it like using the old system. In a catalog, you will always see the panel open inside of a new window. If you prefer the old UI, simply open the dialogs directly (via the button at the top of the photo window, for example, on the desktop, just click the photo).)
