The best way to use it is to integrate it into your workflow, instead of trying to force it into being second class. Get some videos from the Adobe CC app walk throughs on our blog to help make the transition easier. The new Creative Suite also includes a few welcome workflow changes that should help you in your workflows. One of the first things you'll see is the *Channels* panel, which helps you keep your layers separate for extending, tweaking, and other edits. From there, you can decide whether you want to just leave the image as is, or apply a layer mask, or add one. You can even compare two channels at the same time. When you've got your image as you want it, you can use the new *Edit in Styles* panel to apply a variety of presets you find on the Web or in a Photoshop library to quickly make your image more polished (think "Save for Web" as well as "Save for Print.") Comparing presets is easy and intuitive. With the new Style Profile panel on the right side of the screen, you can see a visual breakdown of changes that apply to your image, and you can adjust one or more style profiles to see how they affect your image. That's right—with just a few clicks, you can compare the two styles side-by-side, and if you like one better, you can apply it to your image, keeping the original untouched. 933d7f57e6
